Woodchips

Specification:

Dry content: 45-50 %

Wood: Spruce/Pine

A large amount of the log will be turned into wooden chips in process of sawing. Our wooden chips are all from sustainable forestry and is processed and produced in standardized sizes. The wooden chips are sorted where, splinters and smaller pieces and bark are carefully removed. Our wooden chips is suitable for paper industry, cellulose industry, and for bio energy.

The wooden chips are produced from the wood in the log that cannot be used in our sawn products. The wooden chips make it possible to make sure that 100 % of the raw material is used.
